

SUSTAINABLE RESIDENCY PRACTICES

- **Use tools like Albert, Carbulator, and Green Producers Tool (GPT) to calculate and assess emissions in your production.** As part of Filmværksted Viborg, you have access to GPT.
- **Turn off light and devices when not in use**
- **Minimize printing** - Use digital scripts, storyboards and documentation to reduce paper.
- **Art material**
 - Use materials already available in the workshop
 - Leave your leftover materials in the workshop
 - If new materials are needed, choose eco-labelled, fair trade, or organic options. Plan ahead as orders are sent on the first Tuesday of the month.
- **Sort your waste properly.** Follow the guidelines provided to ensure proper recycling and disposal.
- **Avoid overconsumption**
 - **Food.** Buy less and more often to avoid food waste. Choose responsibly sourced food whenever possible. Try to coordinate with other residents.
 - **Furniture.** Do not leave new items in the residency after your stay. Use the exchange area in VIA or second-hand shops, where items can be returned after use.
